VDH Health Districts

The chart below displays the total number of EMS Incidents by VDH Health District relative to the per capita populations. From left to right, the chart orders the districts from highest to lowest based on the rate of overdoses relative to per capita population. This order highlights the regions with the most incidents regardless of population size. The data used to create it contained Emergency Medical Services (EMS) information for reported incidents that involve a substance or have suspected substance involvement dating back to Mar 2021. It is important to note that this data set consists of both fatal and nonfatal overdose related information.

VDH Health District EMS Incidents relative to Per Capita Populations

- Emergencies
- Per Capita Population

*Aggregations using 5 or less entries will be masked and removed from visualizations.
VDH Health Districts

These charts display the percent change in EMS Incidents over the past month and year, allowing for easy identification of regions that have seen a significant increase in incidents recently. The Month-to-Date Change in EMS Incidents focuses on the change in EMS Incidents over the past month. Similarly, the Year-to-Date Change in EMS Incidents displays the change in incidents for each region, but it shows the change over the past year rather than the change over the past month. The data used to create it contained Emergency Medical Services (EMS) information for reported incidents that involve a substance or have suspected substance involvement from the current and previous year. It is important to note that this data set consists of both fatal and nonfatal overdose related information.

*Aggregations using 5 or less entries will be masked and removed from visualizations.

The chart below provides an overview of the localities in the same VDEM Region as the locality or localities of focus dating back to Mar 2021. This is meant to allow for comparison to see how different localities in the same region are handling opioid related overdoses. The data used to create this chart contained Emergency Medical Services (EMS) information for reported incidents that involve a substance or have suspected substance involvement. It is important to note that this data set consists of both fatal and nonfatal overdose related information.

Locality	VDH Health District	Most Common Diagnosis	Change from Previous Month	Change from Previous Year	Emergencies
